Assessment Criteria For Seminar 3, Implementation
Object-Oriented Design, IV1350

Assessments shall be submitted to Canvas *individually*, during the seminar. The assessed person's score is *not* affected. Try to give concrete suggestions. *Motivate your comments, give examples.*

- Is the code easily understood? Do all declarations have explaining names? Are code conventions followed?

- Is there duplicated code?

- Are there methods or classes that are too long?

- Are primitive data or static members used instead of objects?

- Are there methods with unnecessarily long parameter lists?

- Is there one comment per public declaration and no extra comments inside methods?

- Is the package structure good?

- Is there still low coupling, high cohesion and good encapsulation?

- Are unit tests meaningful? Are they complete?

- Is the use of programming best practices explained?

- Is the method and result explained in the report? Is there a discussion? Is the discussion relevant?

Make sure to discuss and/or ask the teacher about questions regarding your own or the assessed solution(s).
